epaddy@gmail.com | +233 50 399 5345 | [Github](#) | [Portfolio](#) | Accra, Ghana

Professional Summary

Results-driven Data Analyst and Machine Learning practitioner with demonstrated experience in predictive modelling, business intelligence, and data-driven decision-making. Cohort 1 graduate of DataBloom Africa with hands-on project delivery in Python, SQL, and Power BI across fintech-adjacent domains. Adept at translating raw data into actionable insights for business stakeholders.

Training & Certifications

DataBloom Africa – Data Analysis Programme – 2025

- Curriculum: Python, SQL, Power BI, Pandas, NumPy, Scikit-learn, ML fundamentals, data storytelling, and project delivery.
- Completed: Data Analysis Certification – DataBloom Africa.

ALX Africa – Professional Foundation & Data Analytics 2024 – 2025

- Completed ALX's structured data analytics track; earned Data Analytics Certificate.
- Led a cross-functional team project designing a UI/UX mental wellness app prototype in Figma.

Cognitive Class (IBM) – Data Analysis with Python 2025

- Completed IBM-backed course covering data wrangling, EDA, and visualisation with Python.

Education

University of Ghana

Accra, Ghana

BSc. Statistics with Computer Science

Expected Sep 2026

Key Courses: Advanced Linear Regression, Machine Learning, Database Systems & Management, Theory of Sampling.

Technical Skills

Languages: Python, SQL

Libraries: Scikit-learn, Linear Regression, Feature Engineering, Predictive Modelling, Pandas, NumPy, Matplotlib, Seaborn

Databases: MySQL, PostgreSQL, Google Sheets

Tools: Git, GitHub, Jupyter Notebook, Figma, Microsoft Excel (Advanced), Power BI

Professional Experience

Unique Insurance Accra, Ghana Nov 2025 – Dec 2025

Data Analyst Intern

- Validated and audited insurance datasets for 3 internal teams, reducing reporting discrepancies by flagging inconsistencies
- Applied Excel functions (VLOOKUP, SUMIF, conditional formatting) to ensure data integrity and accelerate figure verification
- Gained practical exposure to data quality controls and compliance-driven reporting in a regulated financial services environment.

BCG (Forage Virtual Programme) – Data Analyst Simulation Mar 2026

- Analysed simulated multi-channel advertising campaign data to evaluate conversion rates and ROI across audience segments.
- Identified highest-performing channels and produced a structured recommendation deck with data-backed marketing strategy insights.

Projects

Maize Crop Yield Predictor | *Machine Learning Engineer*

- Developed a supervised ML model predicting maize crop yields from soil composition, weather, and agronomic variables
- Applied Lasso, Ridge, and OLS regression for feature selection, reducing model features while maintaining predictive accuracy.
- Executed preprocessing pipeline: numerical scaling, one-hot encoding, and category grouping to improve generalisation.
- Stack: Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn.

Ghana Tech Ecosystem Analysis | *Data Analyst*

- Cleaned and preprocessed multi-source raw datasets using Python, resolving duplicates, nulls, and inconsistent formatting.
- Conducted EDA revealing that 3 sectors accounted for over 60% of startup activity, informing ecosystem growth narratives.
- Designed and delivered 2 interactive Power BI dashboards with KPI cards, trend lines, and slicers for non-technical stakeholder presentations

Data Science Jobs Market Analysis | *Data Analyst*

- Cleaned a 2,000+ row jobs dataset in Excel using filters, conditional formatting, and pivot tables to handle duplicates and missing values.
- Performed salary benchmarking across 10+ job titles and 5 industries using VLOOKUP, IF, and AVERAGEIFS formulas.
- Identified Excel, SQL, and Python as the top 3 in-demand skills and revealed a 35% salary gap between junior and senior data roles via Power BI dashboard.

Used Car Price Prediction Model | *Machine Learning Engineer*

- Built and compared multiple regression models (Linear, Lasso, Ridge) to predict used car prices from engine specs, mileage, fuel type, and manufacture year.
- Conducted thorough EDA identifying mileage and engine size as the two strongest price predictors, reducing RMSE by 18% post-feature engineering.
- Applied one-hot encoding and feature scaling; achieved best model performance with Ridge regularisation.

Leadership & Extracurricular

- Team Lead, Data Analysis Hackathon – directed a 4-person team's analytical workflow and data-driven decision-making under time-constrained conditions, delivering a complete analysis within a 8-hour window.
- Group Leader, ALX Professional Foundation – led a 2-person team to design and prototype a Figma UI/UX mobile app for female students experiencing depression, acting as a virtual counsellor.
